our Canadian
headquarters

EkoMed Global, Canada offers its customers many conveniences from storage, sales, finance to door-to-doors shipping. EkoMed Canada Team has more than 20 years of industry experience. Ekomed Global holds Health Canada medical devise establishment license MDL #11585.

our sterilization
facility

In a sterilization facility established on a total area of 2000 square meters in Hangzhou, China, in compliance with advanced technology standards, European Medical Device Directive (MDD) 93/42/ECC certified, in accordance with EO sterilization and ISO class 7-8 clean room standards, sterilization and production of all kinds of medical equipment and medical textile products are carried out at high capacity and speed.

sterilization

Sterilization comes from the word sterile which is a situation where the biological being loses the capacity to breed or reproduce. Sterilization in its origin is not only limiting the microorganisms but it is also limiting the reproductive capacity of the pathogenic agents which cause infections in the human body.

Any kind of sterilization is in essence realized for not only a point in time but a period of time in our case until the sterilization pouch made-up of polyolefin in some form is a material registered under the trademark of DuPont® as Tyvek™ which has become a generic brand for those medical devices. The content as a medical device is packaged in sterilization pouches in a controlled clean room environment and they are presented for sterilization in various sterilization devices.

There are various types of sterilization listed below:

A. Steam Sterilization (H_2O_2 / steam sterilization)

- Saturated Pure Steam (autoclave)
- Vapor-Phase Hydrogen Peroxide (isolator, clean room)

B. Dry-Heat Sterilization

- Sterilization / Depyrogenization Tunnel
- Sterilization / Depyrogenization Oven

C. Gas Sterilization

- Ethylene Oxide (autoclave) (flexible chamber gas diffusion ethylene oxide sterilization)
- Formaldehyde (autoclave)
- Gas-Phase Hydrogen Peroxide (isolator)

D. Ionizing Radiation

- GAMA (Cobalt 60, radio isotope decay)
- X-ray Radiation
- Electron beam radiation

E. Filtration

- Sterilization Grade Filter (0.2 um filter- liquid, gas / air)

Our type of ethylene oxide sterilization has been evaluated as a new generation of Sterilizers known as Flexible Chamber Ethylene Oxide Gas Diffusion System sterilizers and is a high-tech sterilizer that completes the sterilization process by using low temperature and low dose of Ethylene Oxide gas. The technology has eliminated the infrastructure requirements such as compressed air, water, vacuum lines and drainage channels required by conventional gas sterilizers. Cartridges/ ampoules containing Ethylene Oxide gas are used for sterilization.
